Project Experience

React Software Engineer

WhatsApp clone

Link: https://whatsapp-clone-black.vercel.app/

Description: WhatsApp clone app 100+ users to chat in real-time with one another provided you are a valid and registered user. In this build I employed firebase to handle important tasks such as authentication, authorization and a real-time database. I also used firebase google authentication for sign in options. To make the UI look really beautiful, I used material UI and styled components to give the UI a modern look. The website is hosted on vercel and was built with next js.

Tech stack: React js, Next js, Material UI, Firebase, styled components, JavaScript, react firebase hooks.

Full stack Software engineer

LinkedIn Clone

Link: https://react-linkedin-clone.netlify.app/

Description: LinkedIn clone is my version of the famous website for professionals and job seekers. Built with the react JS on the frontend and firebase on the back end allowing over 500+ users to create, modify and post contents. I employed material UI on the front end to create very nostalgic UI. Redux was used to manage state all through the app. Firebase authentication and authorization to create a new user or log in an existing user into the app. Firebase cloud store is also my database of use for this project keeping all data.

Tech stack: React js, material UI, JavaScript, Tailwind CSS, Firebase, Redux

WORK EXPERIENCE

IPT Powertech group   **Lagos, Nigeria**

Regional Coordinator(diesel)   *July 2019 – Present*

- Manage fuel delivery, storage & consumption in all cell sites such that enough fuel is available all the time in the field increasing availability to 90%.
